

Screenshot shortcuts

Windows 11 · Mac · Chromebook · a full web page in Chrome

stepkeep

Windows 11

Win + **Shift** + **S**

An area, a window or the whole screen, picked in the snip bar. Copied to the clipboard; paste with Ctrl + V.

Win + **PrtSc**

The whole screen, saved as a file in Pictures\Screenshots.

Alt + **PrtSc**

Only the window in front, copied to the clipboard.

PrtSc

Opens the snip bar, like Win + Shift + S. With that setting off: the whole screen to the clipboard.

Win + **Alt** + **PrtSc**

The game or app in front, saved to the Captures folder.

On a laptop where PrtSc shares a key, hold Fn as well: Fn + PrtSc.

Mac

Shift + **⌘ Command** + **3**

The whole screen, saved as a .png on the desktop.

Shift + **⌘ Command** + **4**

Drag over an area to capture it.

Shift + **⌘ Command** + **4** then **Space**

Click a window to capture it alone, with its shadow.

Shift + **⌘ Command** + **5**

The Screenshot toolbar: every option, and screen recording.

Control

Add it to any shortcut above to copy the picture instead of saving a file.

Esc cancels a capture before it is taken.

Chromebook

Ctrl + **Show windows**

The whole screen.

Shift + **Ctrl** + **Show windows**

The capture toolbar: Partial, Window or Full screen, and screen recording.

Ctrl + **Shift** + **F5**

The same toolbar, on a keyboard with no Show windows key.

Power + **Volume down**

A screenshot when the Chromebook is used as a tablet.

Every screenshot is saved to Downloads and copied to the clipboard.

A full web page in Chrome

- 1 Scroll the page to the end and back, so everything that loads on scroll has loaded.
- 2 Open DevTools: **F12** or **Ctrl** + **Shift** + **I** · on a Mac **⌘ Command** + **Option** + **I**
- 3 Open the Command Menu: **Ctrl** + **Shift** + **P** · on a Mac **⌘ Command** + **Shift** + **P**
- 4 Type "screenshot" and choose Capture full size screenshot.
- 5 Chrome saves one PNG of the whole page to Downloads.

Capture node screenshot, in the same menu, takes one element whole: a table, a card.
